

Alg F.F - generic

$f \equiv 0$ (flux oarecare (de obicei 0))

cat timp $\exists P$ un s-t lanț f -nesaturat

• det un $P \rightarrow$ pare in $\log m$ (Alg Edmonds-Karp)

• revizuiam (act) fluxul de-a lungul lanțului P :

$$f_p(e) = \begin{cases} f(e) + c(P) & e \text{ arc direct} \\ f(e) - c(P) & e \text{ arc invers} \\ f(e) & e \notin P \end{cases}$$

• $f = f_p$

$X_f = \{x \mid x \text{ sunt noduri la ultimul pas al percușiei sunt accesibile din s prin lanțuri } f\text{-nesat}\}$

return f , $K = (X_f, V - X_f)$

f max s-t K -taietura minimă

($val(f) \leq c(K)$ cu egalitate pt f f max K -taietura min)

$$val(f_p) = val(f) + c(P)$$

(la fiecare pas fluxul crește cu cel puțin o unitate)

\Rightarrow Nr de pasi \leq capac taiet.

parc. minime

$$O(\sum_{i=1}^n \frac{C_i}{c_i})$$

$$capac \text{ t. min} \leq C \cdot n$$

$$O(m \cdot n \cdot C)$$

capac max a unui

Alg E.K (FF ^{arc} cu BFS) $\rightarrow O(nm^2)$
