Variabile aleatoure conditionate si media conditionata (in cap discret)

Fie X, y două v.a. discrete cu repartitia comună:

X	y1 y2	- yj ym	Pi
×1 ×2	TIAA TIA2	Taj Tam	PI
Zi	Vit	Tij Tim	Pi
Žm		Mnj	
19j		2j gml	1

$$X \mid Y = Yj : \begin{pmatrix} \chi_1 & \chi_2 & \dots & \chi_m \\ \frac{\Pi_{ij}}{2j} & \frac{\Pi_{2j}}{2j} & \dots & \frac{\Pi_{mj}}{2j} \end{pmatrix}$$

Exemplu:

STREET, SQUARE, SQUARE
6
4)

$$X | Y = -1 : \begin{pmatrix} -2 & 1 \\ \frac{0.2}{0.3} & \frac{0.1}{0.3} \end{pmatrix}$$

$$\frac{1}{X} = 1: \begin{pmatrix} -1 & 0 & 2 \\ \frac{0.1}{0.4} & \frac{0.1}{0.4} & \frac{0.2}{0.4} \end{pmatrix}$$

Obs. : IE(X|Y) se numeste media conditionata

a lui X in report on Y si este o v.a. I $E(X|Y) = \sum_{\chi} \chi \cdot P(\chi = \chi | Y = y)$
